

Building Agentic AI with Amazon Bedrock AgentCore

MODULE 01: Foundations of Agentic Patterns

[Core services in Amazon Bedrock AgentCore](#)

MODULE 02: AgentCore Runtime and Framework Integration

- [How AgentCore Runtime works](#)
- [Endpoint versioning scenarios](#)
- [Running deep research AI agents on Amazon Bedrock AgentCore](#)
- [Iterate faster with Amazon Bedrock AgentCore Runtime direct code deployment](#)
- [AgentCore Runtime Service Quotas](#)
- [Code samples for configuring ANY Agent framework for hosting on AgentCore Runtime](#)
- [Demo: Hosting LangGraph agent with Amazon Bedrock models in Amazon Bedrock AgentCore Runtime](#)

MODULE 03: Security and Identity Management

- [Understanding workload identities](#)
- [Choosing the right authentication pattern](#)
- [How Bedrock AgentCore Identity works](#)
- [Demo: Inbound Auth](#)

MODULE 04: Tool Integration and AgentCore Gateway

- [Strands available tools](#)
- [AgentCore Browser Use Cases](#)
- [AgentCore Code Interpreter Best Practices](#)
- [Deploy MCP servers in AgentCore Runtime](#)
- [Supported targets for Amazon Bedrock AgentCore gateways](#)
- [Lambda Function Input Format](#)
- [API Gateway Target key considerations and limitations](#)
- [MCP Server Target key considerations and limitations](#)
- [Gateway Inbound Authorization](#)
- [Gateway Outbound Authorization](#)
- [Demo: AgentCore Policy - Getting Started Demo](#)

MODULE 05: Agentic Memory Implementation

- [Common use cases of memory](#)
- [Episodic Memory Example](#)
- [Long-term memory vs. RAG](#)
- [AgentCore Memory Best Practices](#)
- [Demo: LangGraph with AgentCore Memory Hooks \(Long-term Memory\)](#)

MODULE 06: Production Monitoring and Observability

- [AgentCore generated observability data](#)
- [AgentCore Evaluation – List of built-in evaluators](#)
